DETAILED ACTION

1. This Office action is responsive to the amendment after final filed 29 July 2005.
2. Claims 1 and 3-16 are allowed.
3. Luca Benini and Giovanni De Micheli, "System-Level Power Optimization: Techniques and Tools", ACM Transactions on Design Automation and of Electronic Systems, Vol. 5, No. 2, April 2000, teaches predicting if the activity of a power-managed component will exceed a break-even time.

The following is an examiner's statement of reasons for allowance: the prior art of record does not teach or suggest, individually or in combination, an integrated circuit in which a first activity detector and power control unit monitors some or all of the input signals received by and output signals produced by a first one of a plurality of functional units to predict when the first functional unit will be inactive.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. Pursuant to MPEP 606.01, the title has been changed to read:

-- CLOCK CONTROL OF FUNCTIONAL UNITS IN AN INTEGRATED CIRCUIT BASED ON MONITORING UNIT SIGNALS TO PREDICT INACTIVITY --
